The International Association for Bridge and Structural Engineering (IABSE) opens the Publications Archive 1929-1999: A Treasure of Information on Structures and Structural Engineering available online for free!

In time with the Celebration of its 80th Anniversary, the “International Association for Bridge and Structural Engineering (IABSE)” has made available online IABSE Publications from 1929–1999. Over 80’000 pages of historic documents on Structural Engineering worldwide are now available online for free, to students, research, professionals and the public.

The IABSE Archive offers a broad coverage of themes, dealing with all types of structures (bridges, high-rise buildings, industrial buildings, sport stadiums, towers, ..), all types of materials (concrete, steel, composites, timber, glass, plastics, ..) and all phases of the construction process (planning design, construction, operation, monitoring, maintenance, rehabilitation, demolition). A major part of the Archive consists of reports collected from IABSE’s Conferences and may be in English, in German or French language. Other IABSE series and periodica are also part of this Archive.

Sophisticated search functions allow searching for keywords anywhere in the full text body of the articles. This will bring many historic reference documents back alive for those interested in the development and achievements of structural engineering. The free access to this Archive is in the spirit of its founders and pioneers who knew no frontiers when it came to exchanging knowledge. A perfect 80th Anniversary gift to the public too.

The digitisation of the IABSE Publications Archive was supported by the IABSE Foundation and has been realised in co-operation with the Swiss Federal Institute of Technology Zurich (ETH) and the Swiss Electronic Academic Library Service (SEALS).

More information: www.iabse.org/association/80yearsIABSE/index.php

The International Association for Bridge and Structural Engineering (IABSE) comprises 4'000 members in 100 countries. Founded in 1929, IABSE deals with all aspects of planning, design, construction, maintenance and repair of civil engineering structures. To fulfil its mission, IABSE organises conferences and publishes a quarterly journal, Structural Engineering International, as well as books and reports. The Association has a number of technical groups and presents awards in recognition of outstanding contributions in the domain of structural engineering.

Third parties may freely distribute this text or any part of it in print or electronic form.
